1. Project Checkpoints
    a. Nov 08 –
        i. Given a user, when the extension is clicked, then the user can select from a list of provided foreground and link colors.
            1. I have created a basic dropdown selection of foreground colors.
            2. I have created a basic dropdown selection of link colors.
            3. I have enabled that when a user selects the foreground color, then the background changes in the extension and also the web page.
            4. I have enabled that when a user selects the link color, then the link color changes in the extension only. I haven't implemented it in the web page yet.
        ii. Ensure that extension works in Firefox.
            1. I haven't tested this in Firefox yet. I know that I will have to modify some of the code that is specific to Google Chrome in my Javascript to get this to work in Firefox. This is my next step in my project
        iii. I have also implemented all of the previous checkpoints that I hadn't accomplished by their due dates. I feel like I am on track with my project.
